City: Tandil, Buenos Aires, Argentina **Age:** 23

Profile

Systems Engineer, currently working in data processing, automation, and backend development focused on decision-making. I have experience in agile teams (Scrum, SAFe), and I'm recognized for my adaptability, continuous learning, and problem-solving skills. I'm passionate about optimizing processes, automating workflows, and exploring new tools through personal and collaborative projects.

Experience

Data & Backend Developer @ ISISTAN - CONICET-UNICEN (Tandil, Buenos Aires) • Apr. 2025 - Act.

I'm currently part of a research and development team at ISISTAN, where I contribute to building solutions focused on data processing and process automation. My work involves collecting large volumes of information from various sources (including search engines and relational databases), analyzing the data using artificial intelligence techniques, and developing backend tools to support decision-making. I also help design and implement interactive dashboards aimed at both technical and non-technical users.

Python Bash Apache Solr Docker MySQL PostgreSQL Gitlab JavaScript

Fullstack Developer @ ISISTAN - CONICET-UNICEN (Tandil, Buenos Aires) • Aug. 2024 - Feb. 2025 • Remote

Supervised professional practices in software development within the framework of a research project at ISISTAN, CONICET-UNICEN. It consisted in the development of a web platform to facilitate teaching through Study and Research Paths (SRP). I worked closely with the project managers on research, design and implementation of the solution, as well as on project documentation. I worked under the supervision of Dr. Alejandro Zunino, director, and Dr. Daniela Godoy, co-director.
